

# Common SteamCMD Errors

## **FAILED (Password is not set) & FAILED (Invalid Password):**

It happens when you try to login with SCMD Workshop Downloader and enter wrong name or password.

### **If SteamCMD asks you for Guard code:**

The first time you log in with SteamCMD, if your account has Steam Guard protection, you will need to enter your Guard code.

## **ERROR! Download item <Item ID> failed (Failure):**

This error can happen for two reasons:

1. You tried to download a Workshop item from an unlisted game, ie; that does not allow downloads by users who have not purchased the game and you have not logged in with an account that has purchased the game.

**SOLUTION:** There is no way to fix this problem unless someone with a Steam account who has purchased the game tries to download it.

2. You tried to download a listed item by signing in with an account that does not own the game.

**SOLUTION:** This can happen with a few games, the solution is simple: Remove your SCMD Workshop Downloader account data and start the download again. The download will start anonymously and what you are looking for can be downloaded.

## **ERROR! Download item <Item ID> failed (File Not Found):**

As its name suggests, it means that the item you were trying to download could not be found.

**SOLUTION:** Make sure all the links you entered are working properly, you can do this by checking each link with the Download List Preview.

## **ERROR! Download item <Item ID> failed (Timeout):**

There are five reasons this can happen:

1. The item you are trying to download is very large, around 1 GB in size.

**SOLUTION:** Press the bottom left options button in SCMD Workshop Downloader 2, activate the "Big Sized Items Mode" option and try again, if it doesn't work, try increasing the number of replays it produces by changing the number on the right of the option.

**2.** You are trying to download a specific Garry's Mod item.

This can happen with some generally old Garry's Mod items. Unfortunately I haven't found a solution for this.

**3.** The item you are trying to download is paid.

Some items of certain games in the Workshop are paid, even if the game they belong to is listed, you will not be able to download them.

**4.** The item you are trying to download belongs to a game that has a registered TOOL or DLC listed, but not the game itself.

One of the examples of this is Don't Starve and Don't Starve Together, there is no solution for this.

**5.** Something weird is going on in the Steam Workshop and it just doesn't work right now.

**SOLUTION:** Try again later

#### **ERROR! Download item failed (No Connection):**

It means, as the name suggests, that the connection was lost while trying to download the Workshop item and the connection retry limit was exceeded.

**SOLUTION:** Check your internet connection, make sure its OK and try again.

#### **ERROR! Missing parameters & Command not found:**

This means that the command to download a workshop item without the corresponding IDs failed or that SCMD List Manager entered a command that it shouldn't., **this should not happen**, but if it happens and prevents the download through SCMD Workshop Downloader, **contact me through the app's Discord** to solve the problem.
